**PORTFOLIO**

In drawing the Avenir® typeface, Adrian Frutiger looked to both the past and the future for inspiration.

Avenir was originally released in 1988 with three weights, each with a roman and oblique version, all using Frutiger's two-digit weight and width convention for names. The typeface family was later expanded to six weights, each with a roman and oblique version. The original Avenir family is made up of designs with gradual weight changes in order to satisfy the needs of specific text applications. While the book and light weights have similar stroke widths, the book weight is well suited for body text, whereas the light was designed for captions and subheads.
